

Drive the transformation of digital experiences by applying user-centered design principles, focusing on enhancing usability and engagement across various sectors such as Healthcare, Entertainment & E-Commerce.

Education

B.Tech. in Computer Science and Engineering from Camellia Institute of Engineering and Technology, Kolkata, 2022-25

Diploma in Mechanical Engineering from Camellia Institute of Engineering and Technology, Kolkata, 2018-21

Diploma in Information Technology Application, (WBCCSS), 2017-18

Core Competencies

- Scalable Application Architecture
- User Experience Design
- Agile Project Management
- Software Quality Assurance
- CI / CD Pipeline
- Cloud Infrastructure Management
- API Development and Integration
- Performance Optimization Techniques
- Team Leadership and Mentorship
- System Design Principles

Technical Skills

- Advanced JavaScript Frameworks:** React, Vue.js, Angular
- Backend Development Frameworks:** Node.js, NestJS, FastAPI, Express.js
- Database Management Systems:** MySQL, PostgreSQL, MongoDB, Redis
- DevOps Tools:** Docker, Jenkins, NGINX, Git, CI/CD
- Real-Time Communication Technologies:** WebSockets, RabbitMQ
- Cloud Services:** AWS, Azure, OpenAI API
- API Development & Integration:** RESTful APIs, GraphQL
- Frontend Technologies:** Tailwind CSS, HTML5, CSS3
- Version Control Systems:** Git, GitHub

Profile Summary

- Driving digital transformation through user-centered design and innovative front-end and back-end engineering, delivering seamless, scalable, and engaging applications across healthcare, entertainment, and e-commerce domains.
- Spearheading cross-functional collaboration & Agile practices to accelerate product delivery timelines, optimize workflow & foster a high-performance engineering culture.
- Designing & executing end-to-end software development lifecycles, from requirements analysis to deployment and continuous optimization, ensuring robust, secure, and high-quality application delivery.
- Expert in building modern, responsive front-end interfaces with React, Vue.js, and Tailwind CSS, and architecting secure, high-performance back-end systems using Node.js, NestJS, and FastAPI.
- Proficient in developing real-time applications, implementing CI/CD pipelines, and managing containerized deployments with Docker and NGINX, with a strong focus on clean code, scalable system design, and continuous learning.
- Integrating real-time communication protocols, cloud services, and API-driven architectures to deliver performant, scalable solutions tailored to dynamic business needs and evolving user expectations.

Career Timeline

Work Experience

Magicmind Technologies, Kolkata

Jul'23 – Present : Team Lead Full Stack Developer

Key Result Areas:

- Leading the development team through complex technical challenges, enforcing coding best practices & cultivating an innovation-driven, excellence-focused engineering environment
- Designing & delivering scalable front-end and back-end solutions in collaboration with cross-functional teams to ensure seamless user experiences.
- Owning the full software development lifecycle, from requirements gathering to deployment & optimization, ensuring timely delivery of secure, high-quality applications.
- Driving code reviews, CI/CD automation, and performance tuning to enhance code quality, accelerate releases, and improve application efficiency.
- Mentoring developers and aligning technical roadmaps with business objectives through active stakeholder engagement.

Highlights:

- Championed agile transformation, driving a 45% acceleration in delivery timelines and elevating cross-functional collaboration.
- Led end-to-end development of a high-traffic web application, boosting user engagement by 60% and directly contributing to revenue growth.
- Engineered and rolled out a streamlined CI/CD pipeline, cutting deployment cycles by 65% and improving release efficiency.

Han River Technology, Kolkata

Feb'22 – Jun'23: Associate Team Lead

Key Result Areas:

- ⌚ Contributed to full-stack development of web applications, delivering robust front-end interfaces and scalable back-end architectures aligned with project specifications.
- ⌚ Authored and optimized application code across multiple programming languages, ensuring compliance with industry coding standards and performance benchmarks.
- ⌚ Resolved complex software issues through systematic troubleshooting, rigorous testing, and performance validation.
- ⌚ Facilitated the migration of legacy systems to modern web platforms, significantly improving system performance, scalability, and user experience.

Softhills Technologies, Cooch Behar

Mar'19 – Feb'22: Full Stack Developer

Key Result Areas:

- ⌚ Directed end-to-end software development lifecycle, from conceptualization & architecture to deployment & post-release optimization.
- ⌚ Pioneered the development and integration of front-end & back-end components, creating high-performance, scalable, and unified application ecosystems
- ⌚ Executed rigorous quality assurance protocols, eliminating defects & enhancing application usability, responsiveness & reliability.
- ⌚ Liaised with clients to capture requirements, delivering tailored technical solutions aligned with strategic business objectives.
- ⌚ Applied industry best practices in coding, architecture & maintainability, ensuring long-term scalability and operational excellence

Projects

⌚ No-Code Low-Code – Code Gen Engine

Led a 6-member engineering team to build a no-code platform for template-based UI customization and auto-generation of full-stack applications.

- Designed an event-driven architecture using RabbitMQ as a message broker to handle background tasks and asynchronous workflows.
- Implemented a JSON-based manifest system that dynamically generates shell scripts for orchestrating multi-step build and deployment sequences.
- Built a FastAPI backend with multi-tenant support, enabling isolated environments for different clients.
- Integrated TypeScript across the codebase for better type safety and maintainability.
- Improved developer productivity and reduced manual configuration time by over 50% through automation and standardized code generation.

(Python, FastAPI, RabbitMQ, JSON, PostgreSQL, MongoDB, TypeScript, Multi-Tenancy)

⌚ AVP Suite – Browser Security Extension

Led a 5-member engineering team in developing a full-stack browser security ecosystem featuring:

- Admin Dashboard and User Dashboard built on the MERN stack with TypeScript, Socket.IO, Firebase Authentication, and Redis caching for real-time session management.
- A browser extension developed using Plasmio + React, integrating IPqualityScore, Google Web Risk, VirusTotal, and ClamAV for multi-layered threat detection and malware scanning.
- Implemented Jenkins-based CI/CD pipelines for continuous deployment and security validation across environments.
- Delivered a real-time alert and analytics system, improving incident response time and threat visibility by 40%.

(React, Node.js, Express, MongoDB, TypeScript, Plasmio, Socket.IO, Redis, Firebase Auth, Jenkins, ClamAV)

⌚ Kaayu – Recruitment System

Led a 6-member team in architecting and delivering a scalable recruitment management platform designed for high performance and automation.

- Built backend APIs using Node.js (Express) and a Next.js frontend for fast, SEO-friendly user interfaces.
- Integrated Python-based ATS (Applicant Tracking System) and resume parsing engine to automate candidate evaluation and data extraction.
- Used MySQL as the primary database with optimized schema design for handling large candidate datasets.
- Implemented Jenkins-based CI/CD pipelines for automated deployment and testing.
- Standardized TypeScript across the codebase to ensure type safety and maintainable architecture.

(Node.js, Express, Next.js, Python, MySQL, TypeScript, Jenkins)

⌚ MagicHR – Human Resource Management System

Led a 9-member cross-functional team to design and implement a feature-rich HRMS platform that streamlined end-to-end employee management.

- Built a React + TypeScript + Redux frontend for a fast, responsive, and modular user experience.
- Developed a secure Express.js backend with role-based access control, rate limiting, and CORS policies to safeguard APIs.
- Used MySQL for structured data storage and Redis caching to enhance performance under heavy load.
- Delivered core HR modules including payroll, attendance, leave, and task management, improving HR operations efficiency.

(React, TypeScript, Redux, Express.js, MySQL, Redis, CORS, RBAC, Rate Limiting)

➡ **MagicHR Desk Monitor – Employee Monitoring Service**

Architected and led development of a real-time employee monitoring extension integrated with MAGICHR to track system activity and work performance.

- Engineered a NestJS backend with Kafka for event-driven processing and PostgreSQL for high-volume data persistence.
- Exposed both GraphQL and REST APIs for flexible client integration and analytics consumption.
- Built an Admin Dashboard using Next.js + TypeScript, enabling HR teams to visualize live activity, productivity metrics, and historical logs.
- Designed scalable microservices architecture to support thousands of concurrent monitoring events per second.

(NestJS, Kafka, PostgreSQL, GraphQL, REST API, Next.js, TypeScript)

➡ **Stylemate – Fashion E-Commerce Platform (3M)**

Contributed as a full-stack developer to the development of a modern fashion e-commerce platform designed for seamless shopping experiences and strong social engagement.

- Built dynamic UI components and product modules using Vue.js and TypeScript, ensuring a smooth and responsive customer interface.
- Developed and optimized Node.js backend services with GraphQL API, enabling efficient product search, filtering, and data fetching.
- Integrated the Facebook Graph API for social login, content sharing, and analytics to boost user engagement.
- Collaborated with designers and backend engineers to enhance performance, cutting average page load time by 30%.
- Worked closely within a 3-member core team to deliver stable releases with end-to-end testing and CI/CD practices.

(Vue.js, Node.js, GraphQL, TypeScript, MongoDB, Facebook Graph API)

➡ **BK Stone Crusher – Industry Management Software (1Y)**

Led the end-to-end development of a comprehensive industry management ERP system, integrating hardware and software solutions to optimize operations.

- Architected a Next.js frontend and microservices backend using Node.js + Express.js, with an event-driven architecture for scalable task processing.
- Integrated weighbridge hardware using Electron.js, Node-SerialPort, and REST APIs, enabling accurate real-time weight capture and automated logging.
- Managed PostgreSQL and MySQL databases, implementing cron jobs and job-queue mechanisms for automated reporting and scheduled tasks.
- Built modules for payroll, attendance, and centralized P&L reporting, streamlining industrial operations and improving operational efficiency by 50%.
- Coordinated hardware-software integration, ensuring seamless communication between ERP and factory equipment.

(Next.js, Node.js, Express.js, Electron.js, Node-SerialPort, PostgreSQL, MySQL, Microservices, Event-Driven Architecture, Cron/Job Queue, Hardware Integration)

 Personal Details

Date of Birth: 20th October 1999
Languages Known: English, Hindi & Bengali
Present Address: Kolkata, 700102
